PicoC

This is a Win32 port of [picoc](#) (Pico C), a very small C language interpreter designed for UNIX-based systems.

Just type source code, save it to a file, and invoke the interpreter, specifying file name in the command line.

The image shows a Notepad window titled 'hello.c - Notepad' with a menu bar (File, Edit, Format, View, Help). The text in the window is:

```
#include "stdio.h"

void main () {
    printf ("Hello, world!");
}
```

To the right of the Notepad window is a terminal window showing the command prompt output:

```
C:\Tmp\hello>picoc hello.c
Hello, world!
C:\Tmp\hello>
```

Works in Windows 2000, XP, 2003, Vista, Windows 7/8/10.
